

Practical-1:

Aim: Installation of Ubuntu and background

61

steps to install Ubuntu:

1. Using a USB drive:

Most newer computers can boot from USB. You should see a welcome screen prompting you to check your language and keyboard. You then select the option to install Ubuntu. You then select the USB.

If your computer doesn't automatically do so, you might need to press the F12 key to bring up the boot menu, but be careful not to hold it down that can cause an error message.

2. Response to install Ubuntu:

- We recommend you plug your computer into a power source.
- You should also make sure you have enough space on your computer to install Ubuntu.
- We advise you to select download updates while installing & install the third-party software now.

- You should also stay connected to the internet so you can get the latest updates while you install ubuntu.
- If you are not connected to the internet, you will be asked to select a wireless network, if available. We advise you to connect during the installation so we can remove your machine's ip address.

• Allocate drive space:

- Use the checkboxes to choose whether you had like to install ubuntu alongside another operating system, delete your existing operating system and replace it with ubuntu or if you are an advanced user choose the 'something else' option.

• Begin the installation:

- Depending on your previous selections you can now verify that you have chosen the way in which you would like to install ubuntu.
- The installation process will begin when you click the install now button.

Ubuntu needs about 4.5 GB of storage, so add a few extra GB to allow for your files.

select your location:

If you are connected to the internet, this should be done automatically. Once your location is correct & when 'Erase disk' is selected if you are unsure of your time zone, type the name of the town you are in or click on the map and we will help you find it.

select your preferred keyboard layout:

click on the language option you need if you're not sure, click the 'default' keyboard layout button for help.

• Enter your login & password details.

• Learn more about Ubuntu while the system installs

• That's it!
All that's left is to install your computer and start enjoying Ubuntu.

Steps to change background settings

- Appearance settings :
 - go to appearance settings in ubuntu
 - click on appearance menu at the top right corner, on top menu bar and select system settings...
 - A window will pop up with all settings divided into Personal Appearance and System option again click about select the appearance icon

changing wallpaper picture :

- On the left side of background panel, you can see your current wallpaper.
- On the right side is part where we can select one of ubuntu wallpapers clicking on any thumbnail our wallpaper will be changed right away with a fading effect.
- If you want to select wallpaper from your Picture folder, click the drop down menu above thumbnails and select the Picture folder.

you will see all the pictures in your pictures folder as thumbnails, where you can select them as your wallpaper. To add wallpaper that is in another folder, just click the plus icon below the thumbnails and then in pop-up window, select the path to your custom folder and choose the picture inside of it.

• changing ubuntu theme:

• Ubuntu also has an option to change the desktop theme, which in one click will change the entire way your computer looks.

• To do that, click on the dropdown menu below the wallpaper thumbnails and choose between Ambiance, Radiance or High Contrast.

• Ambiance is a light theme that looks a bit more mac like while Radiance is the darker brown theme used in Ubuntu by default.

• change the size or rotation of screen:

• you can change new big things appear on the screen by changing the screen resolution

• you can change which way up things appear by changing the rotation. Then the icon on the very right of the menu bar and select system settings.

• If you have multiple displays and they are not mirrored, you can have different settings on each display. Select a display in the preview above. Select your desired resolution and install.

• Click apply. The new settings will be applied for 30 seconds before reverting back. That way if you cannot do anything with the new

Time settings change time zone of your system.

• If you are currently in Indian time. Note the time change. Change the time zone back to your local time zone.

• First click on the clock on the desktop bar, choose Time & Date settings & choose world map, & choose automatic

20/20

aim: Installing and removing software

1. Install gcc package, verify that it runs and then remove it:

Step 1: First type 'gcc -v' to know if you have already installed gcc compiler or not. If the output is blank then it means that you don't have gcc installed.

Step 2: Type 'sudo apt-get install gcc'. After typing the following command installation will take place.

Step 3: Type 'sudo apt-get install build-essential'. This will install all the libraries required for C & C++ programming language.

6] Now to uninstall gcc compiler:

In GCC 5.1.0, although there is no top-level uninstall target, some dictionaries do have it in particular gcc, so you can do:

Type : `cd build/gcc`
`sudo make uninstall`

This does not remove everything that was installed, but remove major executable like gcc, g++, cpp ... contained in that directory.

~~20/12~~

• 5% \$ input
output: 30% in the input manual
care directly node);
A few useful input commands;
'q', quit;
'?' lists all input commands;
'h' shows the input manual;
'm' shows SET' vials the
current manual, etc;

radical 9:

Aim: mitigation of gap, main command :
documentation :

finding info documentation learn the command via: bring up the file, put in the gap command, bring up the stage section

1. The first part of the paper is devoted to a general discussion of the problem of the existence of a solution of the system of equations (1) for arbitrary values of the parameters α and β . It is shown that the system has a solution for arbitrary values of the parameters α and β if and only if the condition $\alpha + \beta = 1$ is satisfied.

1884
 and typing the command
 output will be displayed
 and the other commands
 will be streaming into the
 command line. The command
 will be executed and
 you can also view the
 output (up) & (backspace)
 down) keys.

• Finding man pages from the command and zip: Bring up the man page for the 'ls' command. Is it available in the examples section.

Answer: So use the 'man' command simply type 'man' command now we are going to find the manual for 'ls' command. simply type: 'man ls'

• Finding man pages by topic. What man pages are available that describe the compilation

Answer: 'man', 'zip' are some man pages which are available for describing the compilation simply type: 'man zip'

• Finding man pages by section. Even the command like bring up the man page for the printf command will show manual page section and describing function found.

• ~\$ man ls
OUTPUT: NAME:

ls - list directory contents

SYNOPSIS:
ls [OPTIONS]... [FILE]...

DESCRIPTION:

obtain information about the files and entries alphabetically of none of the options are specified.

-a, --all

do not ignore entries

-A, --almost-all

do not list implicit, and...

--author

with -l, print the author of each file

-b, --escape

print C-style escapes for non-graphic characters

-c

list entries by columns

~\$ man tar

OUTPUT: NAME: tar GNU version of the tar archiving utility

SYNOPSIS:

tar [-J] A --concatenate [-C --compress

1d --diff --compare] --delete [-a --append]

```

e --list --dest-label --update --
output --get [option] [pathname ...]
description:
top story and extracts file from
top of the archive
function usage
- a --concat --file is an archive
  append the file
- c, --create
  create a new archive
- d, --diff, --compare
  find differences between
  and file system
--delete
delete from the archive
- s, --append
append files to the end of an
archive

```

```

--v man 3 psutil:
NAME: psutil, psutil, psutil, psutil, psutil,
v, psutil, psutil, psutil, psutil, psutil
output version
DESCRIPTION:
The psutil module in the psutil family provides
output according to a format of
desired data

```

number: the number corresponds to what
 section of the manual page is being
 used command: what is the
 command? the man page you want
 to look at and that is the man
 page you want to look at. The
 page in different sections in
 the man page can be the section
 of the page, the page name is
 the which is the page name is
 man - a is the way to use
 in a way
 you can tell which section a man page
 is with man - k. It will be
 multiple as is you need to use
 to limit it
 simply type: man 3 psutil

command line: the command line is available
 options for the man command.

answer: --v man 3 psutil = m a = error
 : not a
 4/23/23

4/23/23

Technical

Aim: Command line operator

1] Install new package on your system

:#~ sudo apt-get install [package name]

2] Remove package installed

:#~ sudo apt-get remove [package name]

3] Find password file in / using find command

:#~ find / -name password
o/p: ./usr/share/doc/passwd
./usr/sbin/passwd
./etc/passwd
./etc/passwd

4] Find the directory password file under user and org level down:

:#~ find / -maxdepth 2 -name password
o/p: /etc/passwd

5] Find the password under user org 2

:#~ find / -maxdepth 3 -name password
/usr/bin/passwd
/etc/passwd
/etc/passwd

6] Find the password file between sub directories

:#~ find -maxdepth 3 -maxdepth 5 -name password
o/p: /usr/bin/passwd
/etc/passwd

7] Create a symbolic link to the file you found in step

:#~ ln -s file1 file2

8] Create an empty file example.txt & move it to /tmp directory using absolute path name

:#~ touch example.txt

:#~ mv example.txt /tmp

9] Delete the file moved to /tmp in previous step by absolute method

:#~ rm /tmp/example.txt

terminal 5

File: file operations
explorer mounted the system on your
computer

Answer: d) - R

What are the different ways of exploring
the mounted file system on Linux?

Answer: mount

Copying text from file

Answer: cp command, mv command

Find the location of `ls`, `ps`, `bash` command

Answer: `ls`
if: `ls : /bin/ls /usr/bin/ls /usr/sbin/ls`

Answer: `ps`
if: `ps : /bin/ps /usr/bin/ps /usr/sbin/ps`

Answer: `bash`
if: `bash : /bin/bash /usr/bin/bash /usr/sbin/bash`

10/10

Q5] Archiving and backup the wpa2 data
 key using tar, gzip and bzip2
 command

Answer: gzip filename.txt, bzip2
 filename.txt

Q5] The diff command is used diff
 of two files

Answer: diff filename1 filename2

Q] The patch command is patch a file
 and reverse the patch using patch
 command again

6/12/21

Q1] The Environment
 which account you are logged in?
 How do you find out?

Answer: who command & w command

Q2] display /etc/passwd file using cat
 command and understand the importance
 of shadow file How is different than
 passwd file

Answer: cat /etc/passwd
 As with the passwd file, each field in the
 shadow file is also separated with ":"
 colon characters and are as follows:
 • username, up to 8 characters. case-sensitive,
 usually all lowercase. A direct match
 to the username in the /etc/passwd
 file.

Q.5] Get your current working directory

Answer: pwd

Q.6] Explore different ways of getting command history, how do you provide easy executed command without typing it.

Answer: history
! Use line number

Q.5] Create alias to most common used commands.

Answer: alias label = "command"

Q.6] Create, modify, search and navigate a file in editor

Q.7] Creating a file

Q.8] Create a file on the terminal type vi followed by filename

Q.9] Modifying a file

Q.10] Modify a file on the vi editor, type

Q.11] Search in a file

Q.12] Find a word press / followed by the word to search

Q.13] Navigate:

Movement in four directions

key	Action
h	Moves cursor up
j	Moves cursor down
k	Moves cursor left
l	Moves cursor right

Word Navigation:

Key	Action
b	Moves back to beginning of the word
e	Moves forward to the end of the word
w	Moves forward to the beginning of the word
0 (zero)	Moves to the character of a line
\$	Moves to the end of line

Scrolling:

Key	Action
Ctrl + f	Scrolls forward
Ctrl + b	Scrolls backward
Ctrl + d	Scrolls half page
Ctrl + u	Scrolls half page back

Q.2] Show all cursor commands like search, replace, highlight, new line number

Replace

Syntax: /q/ word to be replaced /r/ new word /gc

```

jeba@jeba-VirtualBox: ~
$ cat file.txt
Hello
This is my Linux example
Wellcome
This is VI Editor
Thank you
    
```

```

jeba@jeba-VirtualBox: ~
$ sed -i 's/Hello/Wellcome/g' file.txt
jeba@jeba-VirtualBox: ~
$ cat file.txt
Wellcome
This is my Linux example
Wellcome
This is VI Editor
Thank you
    
```

```

jeba@jeba-VirtualBox: ~
$ sed -i 's/Wellcome/Thank you/g' file.txt
jeba@jeba-VirtualBox: ~
$ cat file.txt
Thank you
This is my Linux example
Thank you
This is VI Editor
Thank you
    
```

2] Highlight

The sed command

```
jetba@jetba-VirtualBox:~$ cat hi.txt
hello
This is our Linux example
welcome
hello
This is vi Editor
Thank you
```

5] show the file number
we are

```
jetba@jetba-VirtualBox:~$ cat hi.txt
hello
This is our Linux example
welcome
hello
This is vi Editor
Thank you
```

terminal 2

File : direct security
of the code is change user privilege
to root.

create an user named user1

```
jetba@jetba-VirtualBox:~$ sudo useradd -s /bin/bash user1
Adding user `user1' with password
Adding new user `user1' with password
Adding new user `user1' with password
Adding new user `user1' with password
Adding new user `user1' with password
```

to give some user great privilege edit /
etc/passwd using vi editor. Enter the line
as highlighted below.

```
jetba@jetba-VirtualBox:~$ cat /etc/passwd
root:x:0:0:root:/root:/bin/bash
jetba:x:1000:1000:jetba:/home/jetba:/bin/bash
user1:x:1001:1001:user1:/home/user1:/bin/bash
```

6] identify operations that requires
privileges

```
jetba@jetba-VirtualBox:~$ cat /etc/passwd
root:x:0:0:root:/root:/bin/bash
jetba:x:1000:1000:jetba:/home/jetba:/bin/bash
user1:x:1001:1001:user1:/home/user1:/bin/bash
```

1] use of nmap command

```

kali@kali:~$ nmap -sV 192.168.1.1
Nmap scan report for 192.168.1.1
Host is up (0.0000000s latency).
Not shown: 65535 closed ports
Host is up (0.0000000s latency).

```

2] use of host command

```

kali@kali:~$ host 192.168.1.1
192.168.1.1.in-addr.arpa.

```

3] use of telnet command & nmap command

```

kali@kali:~$ telnet 192.168.1.1
Trying 192.168.1.1:
Connected to 192.168.1.1.
Escape character is '^]'.
kali@kali:~$ nmap -sV 192.168.1.1
Nmap scan report for 192.168.1.1
Host is up (0.0000000s latency).
Not shown: 65535 closed ports
Host is up (0.0000000s latency).

```

```

kali@kali:~$ nmap -sV 192.168.1.1
Nmap scan report for 192.168.1.1
Host is up (0.0000000s latency).
Not shown: 65535 closed ports
Host is up (0.0000000s latency).

```

4] use of shell script

5] use of shell script

6] use of shell script

7] use of shell script

8] use of shell script

9] use of shell script

10] use of shell script

11] use of shell script

12] use of shell script

13] use of shell script

• echo \$SHELL

```

kali@kali:~$ echo $SHELL
/bin/bash

```

20/10

```

vi filename.sh
#!/bin/bash
echo "Shh shure!"

```

```

chmod 777 filename.sh
./filename.sh

```

• `sed` to write and execute a shell script

shell script is just a simple text file with .sh extension having executable permission

• `open` terminal

• `cd` navigate to the place where you want to create script using `cd` command

• `touch filename.sh`

• `vi filename.sh` [you can use your favourite editor to edit script]

• `chmod 777 filename.sh` (you making the script executable)

• `./filename.sh` or `./filename.sh` (you running the script)

• `echo` to display your name :

```
#!/bin/bash
```

```
echo "Enter your name:"
```

```
read name
```

```
echo "My name is $name"
```

```

1 // Program to find the sum of two
2 // numbers
3 #include <iostream>
4 using namespace std;
5 int main()
6 {
7     int a, b;
8     cout << "Enter two numbers: ";
9     cin >> a >> b;
10    int sum = a + b;
11    cout << "Sum of two numbers is: " << sum << endl;
12    return 0;
13 }

```

• Program to find the sum of two numbers

vi filename.h

#1/din/bah

$a = 100$

$b = 25$

$sum = a + b$

echo "sum is \$sum"

```

1 // Program to find the sum of two
2 // numbers
3 #include <iostream>
4 using namespace std;
5 int main()
6 {
7     int a, b;
8     cout << "Enter two numbers: ";
9     cin >> a >> b;
10    int sum = a + b;
11    cout << "Sum of two numbers is: " << sum << endl;
12    return 0;
13 }

```

• Program to find the sum of two numbers

```

1 // Program to find the sum of two
2 // numbers
3 #include <iostream>
4 using namespace std;
5 int main()
6 {
7     int a, b;
8     cout << "Enter two numbers: ";
9     cin >> a >> b;
10    int sum = a + b;
11    cout << "Sum of two numbers is: " << sum << endl;
12    return 0;
13 }

```

[illegible]

$ cp /usr/bin/ls /usr/bin/ls.bak
$ cp /usr/bin/ls /usr/bin/ls.bak
$ cp /usr/bin/ls /usr/bin/ls.bak

```

6] Add a line above / below the matched string
To add a new line with some content above every pattern match, use option 'a'.

```

$ cd /usr/bin
$ cp /usr/bin/ls /usr/bin/ls.bak
$ cp /usr/bin/ls /usr/bin/ls.bak
$ cp /usr/bin/ls /usr/bin/ls.bak
$ cp /usr/bin/ls /usr/bin/ls.bak
$ cp /usr/bin/ls /usr/bin/ls.bak

```

To add a new line with some content below every pattern match, use option 'b'.

```

$ cd /usr/bin
$ cp /usr/bin/ls /usr/bin/ls.bak
$ cp /usr/bin/ls /usr/bin/ls.bak
$ cp /usr/bin/ls /usr/bin/ls.bak
$ cp /usr/bin/ls /usr/bin/ls.bak
$ cp /usr/bin/ls /usr/bin/ls.bak

```

7] To change a whole line with matched pattern

To change a whole line to a new line when a search pattern matches option 'c'.

```
tcsc@tcsc-VirtualBox:~$ sed '/linux/c "this is linux"' cs.txt
subjects offered in cs
datastructure
database management
"this is linux"
python
green tech
softskill
stats
calculus
computer basic
```

8] Appending lines

To add some content before every line with sed, use * and & as follows.

for

```
tcsc@tcsc-VirtualBox:~$ sed -e 's/.*/Thanks &/' cs.txt
Thanks subjects offered in cs
Thanks datastructure
Thanks database management
Thanks linux
Thanks python
Thanks green tech
Thanks softskill
Thanks stats
Thanks calculus
Thanks computer basic
```
